Usefulness

Leading the way in user-friendliness

Fuji Electric launched the Twin Breaker Series to world markets in 1990, in which molded case circuit breaker (MCCB) and earth leakage circuit breaker (ELCB) types were unified in external dimensions for the first time in the world. The Twin Breaker Series was highly evaluated and gained strong support, and the concept of Twin Breakers was established as Japan's de facto standards for MCCBs and ELCBs.

In 1992, Fuji Electric released the Super Twin Breaker Series, which enabled user installation of internal accessories for the first time in Japan.

In 1995, Fuji Electric released the Super 60 Series and advanced modularization via uniform external dimensions. In 2001, Fuji Electric launched the *a*-Twin Series to further advance the miniaturization and modularization of economic types with 100A frame or less as Japan's first multi-standard circuit breakers satisfying domestic and international standards. Since then, Fuji Electric has been making further product improvements by predicting market trends.

In recent years, market globalization has increasingly accelerated. At the end of 2004, the Japanese Industrial Standards (JIS) were aligned with the IEC standards, and the globalization in this field has been further accelerated.

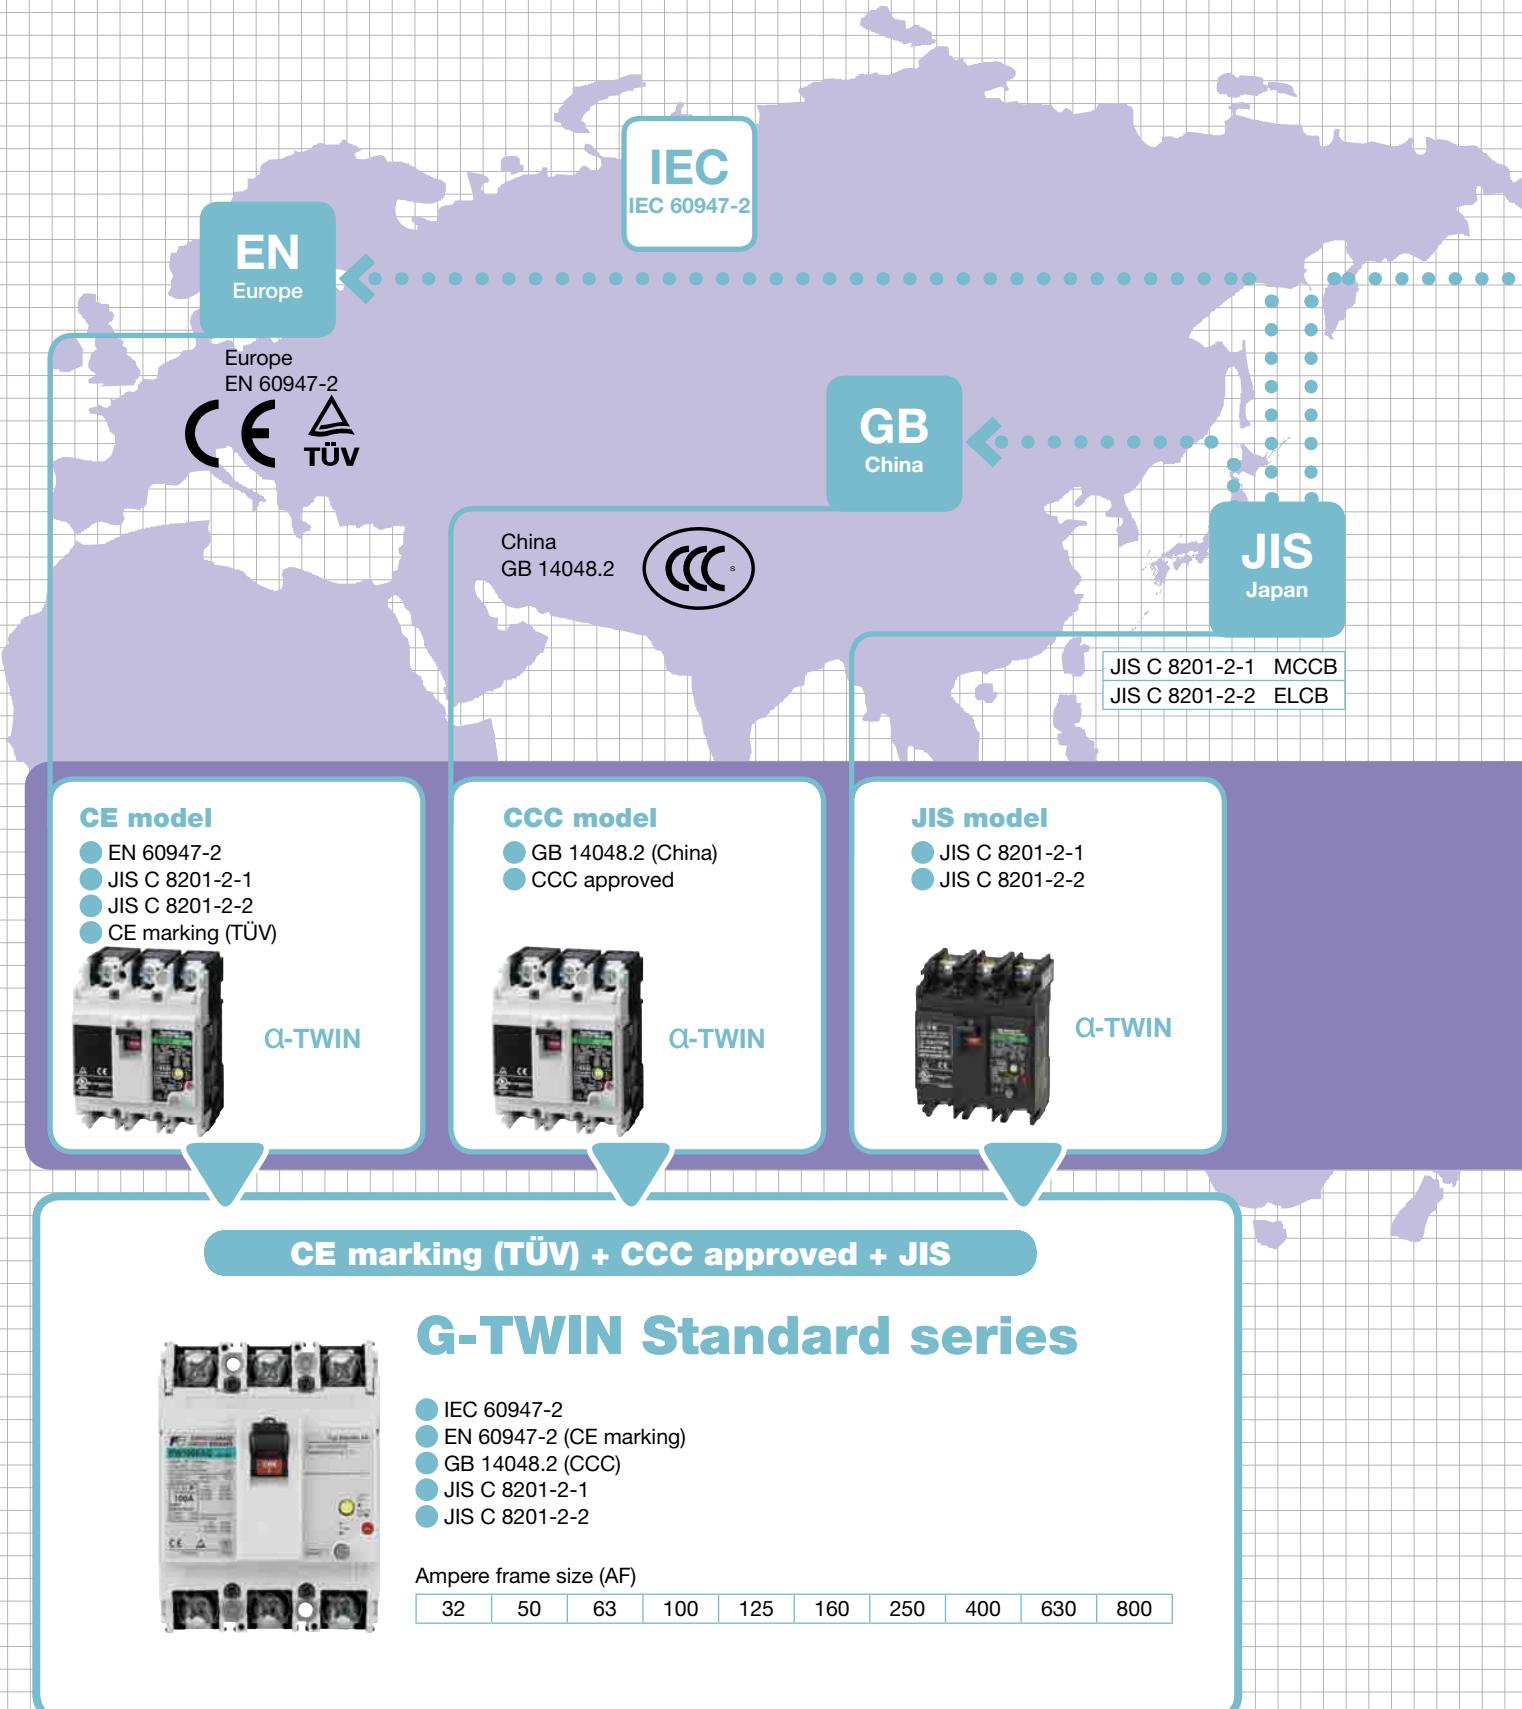

Based on the Twin Breaker Series, Fuji Electric has expanded the range of its products conforming to and approved by international standards for global markets, always advanced the innovative development of fundamental technologies in response to the market demand, and developed the G-TWIN Series of MCCBs and ELCBs.

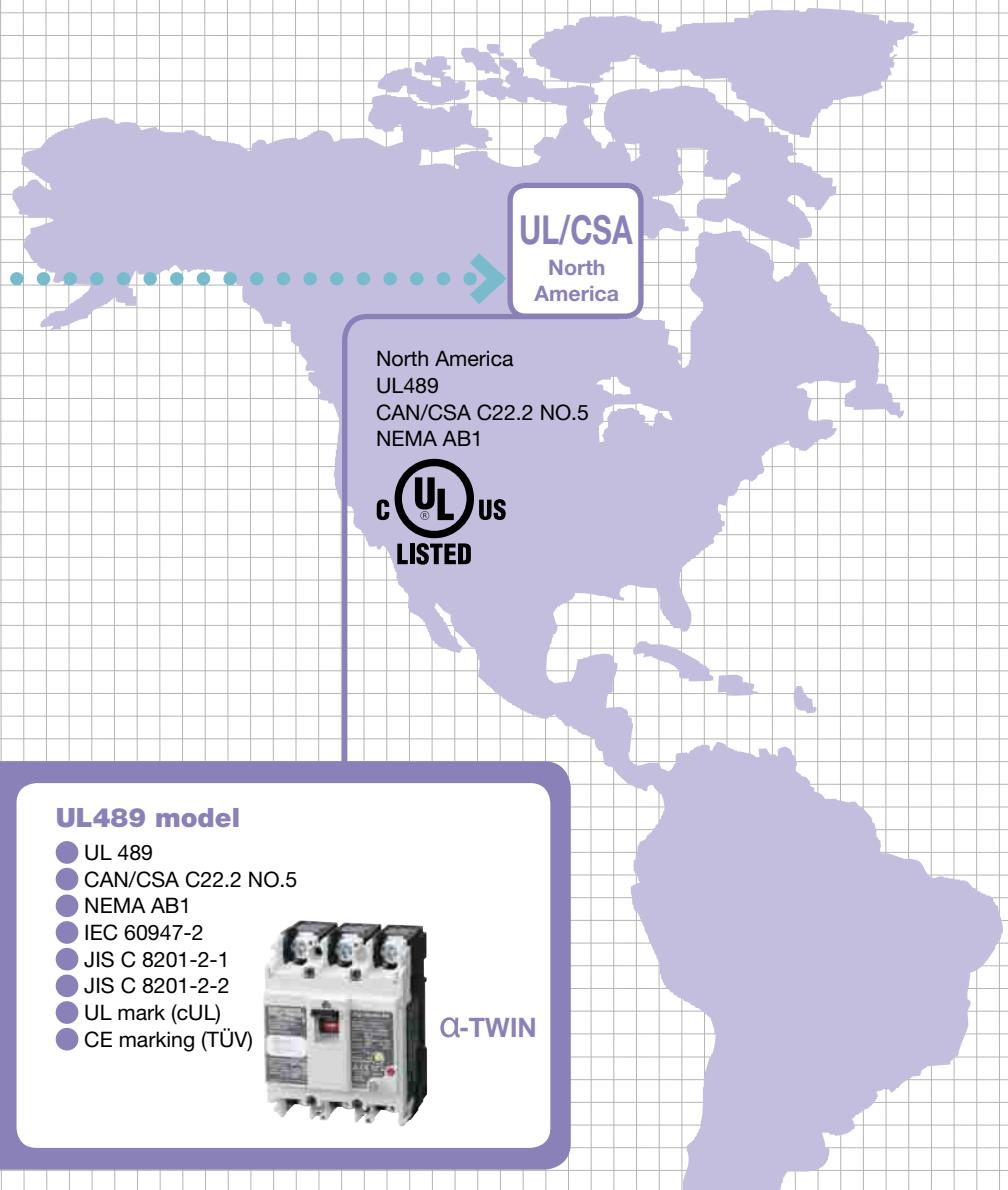

GLOBAL-TWIN

Conforming to IEC & local Standards

The G-TWIN series is a global breaker series that satisfies all major standards.

UL489 model

- UL 489
- CAN/CSA C22.2 NO.5
- NEMA AB1
- IEC 60947-2
- JIS C 8201-2-1
- JIS C 8201-2-2
- UL mark (cUL)
- CE marking (TÜV)

G-TWIN

UL mark (cUL) + CE marking (TÜV) + CCC approved + JIS

G-TWIN Global series

- IEC 60947-2
- EN 60947-2 (CE marking)
- GB 14048.2 (CCC)
- JIS C 8201-2-1
- JIS C 8201-2-2

- UL 489
- CAN/CSA C22.2 NO.5
- NEMA AB1

Ampere frame size (AF)

----	-----	-----	-----	-----	-----	-----

GLOBAL-TWIN ELCB

Compact models with unified dimensions meeting UL489 480V and IEC 440V requirements

Compact & High performance

Compact size meeting UL489 480V requirements & same dimensions as MCCB

ELCB

Rated voltage 480V
(W105 x H181 x D68 mm)

Same dimensions

MCCB

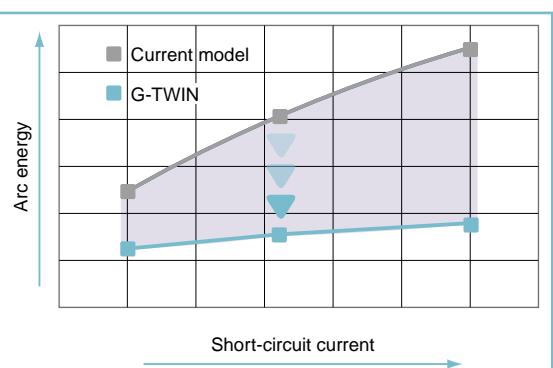

Rated voltage 480V
(W105 x H181 x D68 mm)

Technical innovation

Arc and gas flow control technology

Effect of "ablation breaking technology"

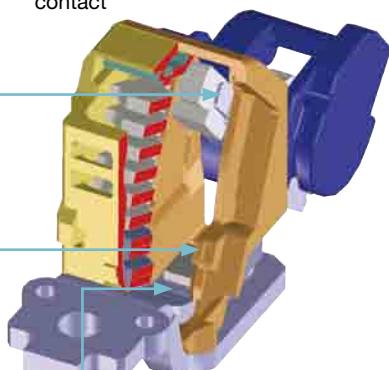

Decrease by
30%!

Rated voltage 480V
BW250RAGU
(W105 x H181 x D68 mm)

Moving contact cover

- Arcing prevention at the bottom of moving contact

Narrow slit resin

- Increased arc voltage due to narrow slit effect
- Increased arc voltage and high-speed moving contact opening by ablation effect
- Suppression of internal pressure rise by adjusting the narrow slit width

- Magnetic yoke arrangement
 - An increase in the repulsion force of the moving contact at initiation of contact opening

Ecology

Advanced environmental technology Conforming to the RoHS Directive

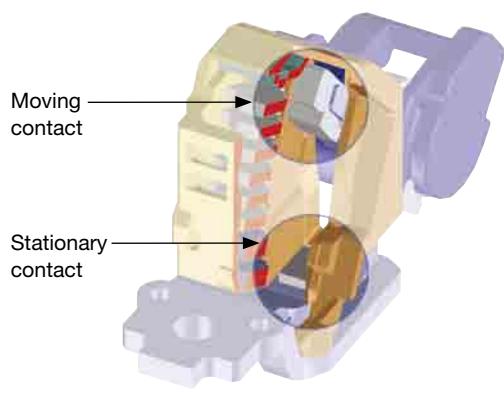

The G-TWIN Series is designed to lower environmental impact.

Recycling

- For easier recycling, all major parts are marked with the names of the materials used.

Conforming to the RoHS Directive

- Lead-free (Pb-free) solder is used.
- Free of hexavalent chromium (Cr^{6+} -free)
(125 to 800AF)

Usefulness

Leading the way in user-friendliness

Unifying and reducing the types of internal accessories

32~100AF

- Internal and external accessories
- A wider range of customer-mountable accessories

ELCB

Shunt trip device

Undervoltage trip device

Auxiliary switch

Alarm switch

125~250AF

- Sharing internal accessories of 125/160/250AF breakers.

ELCB

Shunt trip device

Undervoltage trip device

800		6

GLOBAL-TWIN ELCB

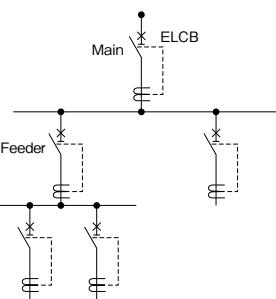

Newly developed earth leakage detection circuit

Easier protection coordination

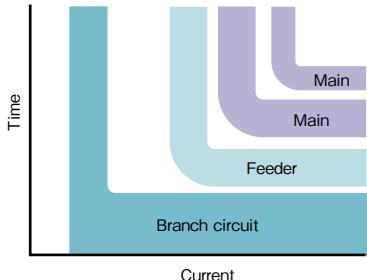

Four-step changeover switch
($I \triangle n$ and tripping time setting)

	$I \triangle n$ (Change over type)	Maximum tripping time
A-TWIN	100/200/500mA	0.1second (fixed)
G-TWIN	100/300/500/1000mA	0.1/0.4/1/2second (changeover)

Ground fault current protection coordination can be taken easily.

Instantaneous and Time delay type operating characteristic

New three-phase power supply circuit functions in phase-loss state

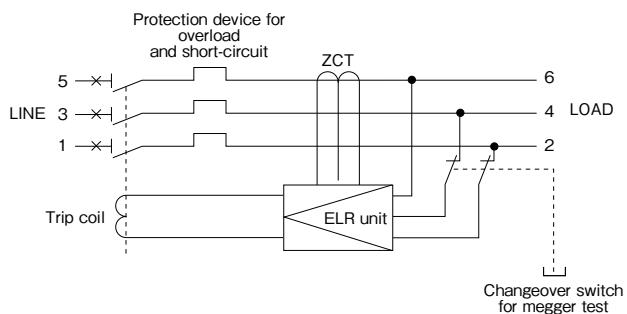

The revised IEC60947-2 stipulates that the ELCB should trip when earth-leakage occurs even in phase loss state in three-phase system. The G-TWIN Series meets this requirement.

Adoption of changeover switch for dielectric test

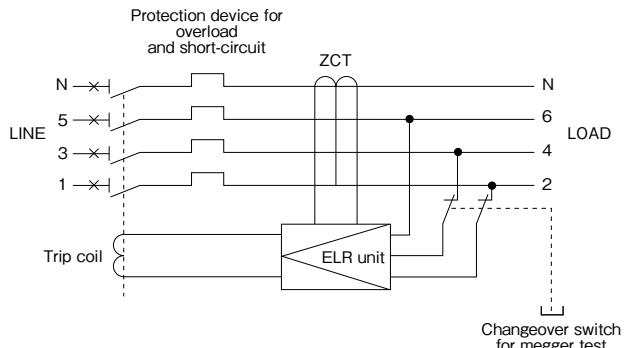

High workability can be obtained since the removal of ELCB wiring is not required at dielectric test during inspection (Adopted for 125AF or more).

ELCB internal wiring diagram

4-pole

World first !

Why ELCB?

GLOBAL
TWIN
ELCB

Purpose of ELCB installation

Prevention of hazards and damage (such as electrical shock, electrical fire, and device damage) that may occur in electrical equipment (as stipulated in IEC 60364).

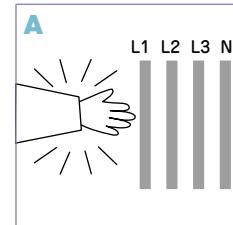

Measures of protection against electrical shock

Protection against electric shock (Protective measures are specified in IEC60364-4-41)

A. Protection against direct contact

Protection of persons from hazards (i.e., electrical shock) that may occur due to touching charged parts of electrical equipment.

Use of ELCB with rated sensitive current not exceeding 30mA is recommended as the additional protective device.

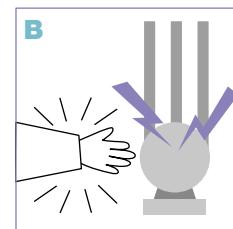

B. Protection against indirect contact

Protection of persons from electrical shock that may occur due to touching exposed conductive parts (such as metal frame of the device) when a fault occurs in electrical equipment.

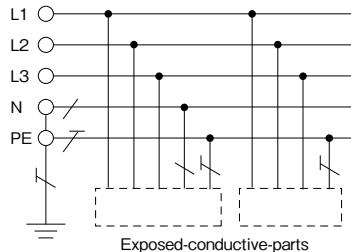

As one of the protective measures, depending on the condition in TT or TN-S system, the automatic cutoff of power supply with ELCB is specified in IEC60364-4-41.

For the details of the installation systems and how to apply ELCB, please refer to the following chart and flowchart.

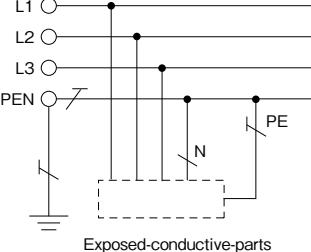

Types of installation systems in IEC 60364

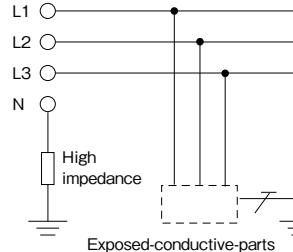

TN-S System

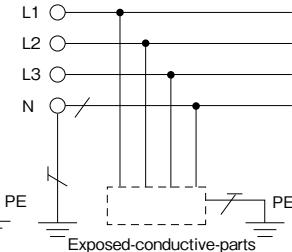

TN-C System

IT System

TT System

L1, L2, L3: Voltage poles, N: Neutral line, PE: Protective conductor

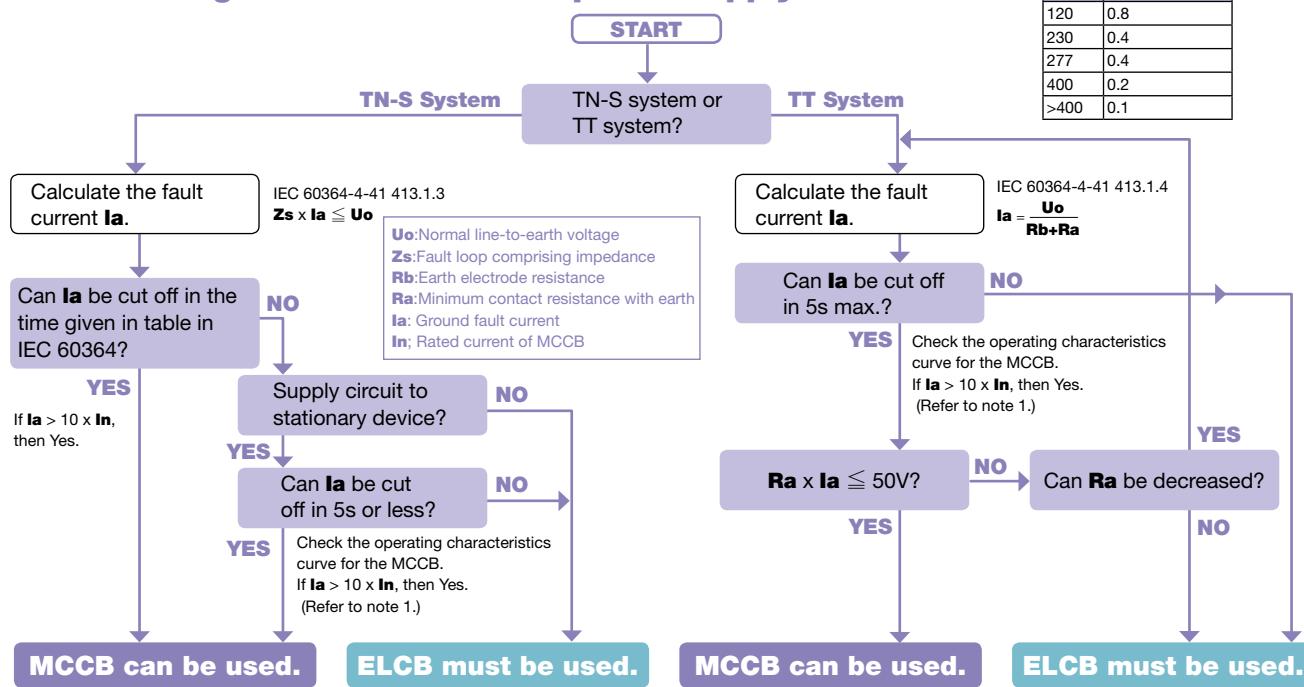

1: A TN-C system has a PEN conductor installed that combines neutral line N and protective conductor PE, and so ELCB cannot be used.
(Ground faults cannot be detected.)

2: An IT system is a non-grounded system, and so ELCB cannot be used. (Ground faults cannot be detected.)

Max. breaking time in TN system
(IEC 60364, table 41A)

Uo(V)	Breaking time (s)
120	0.8
230	0.4
277	0.4
400	0.2
>400	0.1

Flowchart for considering protection against indirect contact using automatic cutoff of power supply

Note 1: The formula $10 \times In$ is a rough guide to the current value for the overcurrent trip device to automatically cut off in 5s or less.

Earth Leakage Circuit Breakers

G-TWIN series

Mounting modifications

■ Mounting modifications

• Standard series

Standard type FUJI breakers are front mounting with front connections. The standard breaker can easily be modified to become front mounting rear connection type, flush mounting type and plug-in type. The additional parts such as insulation bases, barriers, covers and similar parts are added as required.

**Front mounting
Front connection**

BASIC DESIGN

Additional main parts	Front mounting Rear connection (X type)	Additional main parts	Flush mounting Rear connection (E type)	Additional main parts	Plug-in mounting (P type)

Earth Leakage Circuit Breakers

G-TWIN series

Wire size and terminal

■ Notes on wiring (global series)

Notes on connecting wires (conductors)

- Connect wires to the UL breaker according to NEC (National Electric Code) or CEC (Canadian Electrical Code) Part 1.
- Use 75°C copper wires for wiring. UL-certified or CSA-certified wires are recommended.
- If a large current (for example, a short-circuit current) flows, it causes a huge electromagnetic force between wires. Therefore, be sure to secure the wires sufficiently.
- Re-tighten terminal screws periodically.

Code	Terminal position		Applicable breaker type		
	Line	Load	EW50, 100	EW125, 250	EW400, 630, 800

Notes: • AWG/MCM is the UL approved wire unit.

• The allowable temperature of wire is 75°C. (UL CSA approved)

• Be sure to use UL-certified or CSA-certified crimp tools commercially available.

Block terminal connection

- Choose from the stranded wires shown in Table.

Wire size: AWG or MCM [mm ²]	No. of wires stranded
14 to 2 [2.1 to 33.6]	7
1 to 4/0 [42.4 to 107.2]	19
250 to 500 [127 to 250]	37

Values in [] are those converted from AWG or MCM sizes to mm².

* See the instruction manual that comes with the breaker for more details.

Precautions

- Two wires of different sizes cannot be connected to the same block terminal.
- Be sure to use stranded wires according to Table "Number of wires stranded."
- Multi-conductor wires cannot be connected.
- Do not solder wires together.

■ Variation of internal accessory

- 32 to 100AF

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit.
See page 07/63.

Alarm switch (Type K)

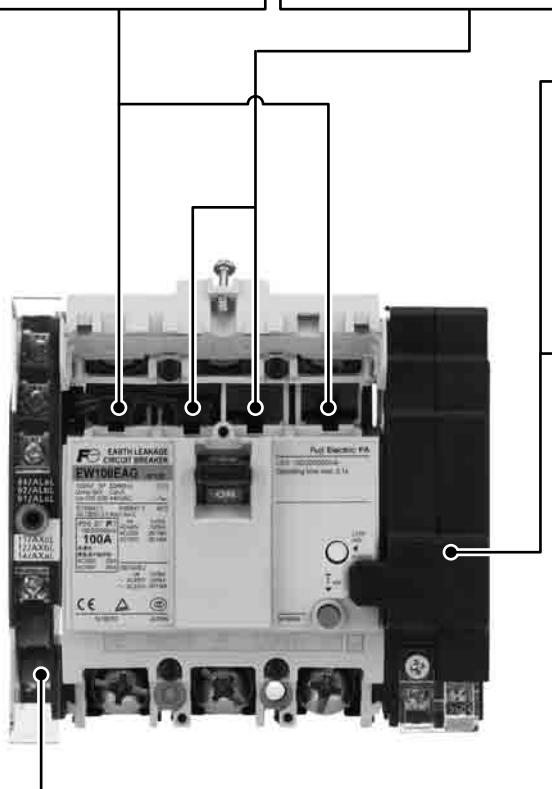

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped.
See page 07/63.

Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance.
See page 07/64.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops.
It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating.
See page 07/65.

Terminal block (Type A)

A wiring terminal for internal accessories
(Order with W, K or F)
See page 07/66.

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit.
See page 07/63.

Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped.
See page 07/63.

Shunt trip device (Type F)

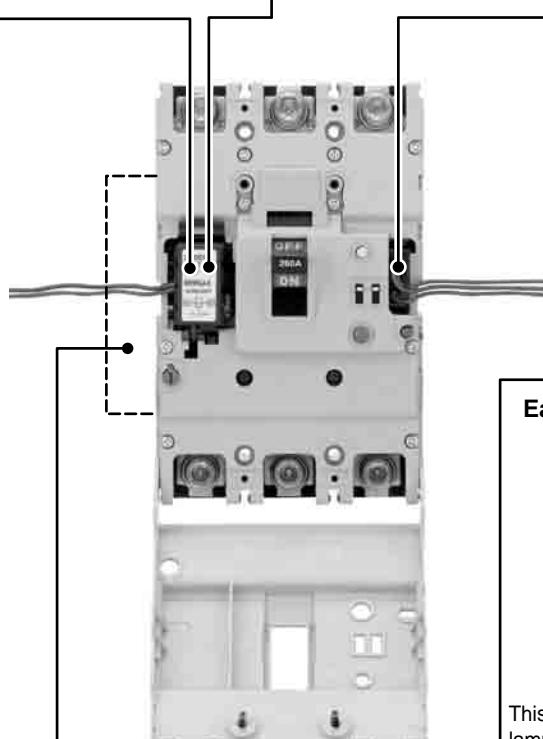

The purpose of this accessory is to trip the breaker from a distance.
See page 07/64.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops.
It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating.
See page 07/65.

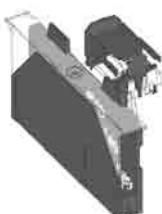

Earth alarm switch (Type L)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped by leakage current.
See page 07/63.

Terminal block (Type A)

A wiring terminal for internal accessories
(Factory-mounted)
See page 07/66.

■ Variation of internal accessory

- 400 to 800AF

Alarm switch (Type K)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped. See page 07/63.

Shunt trip device (Type F)

The purpose of this accessory is to trip the breaker from a distance. See page 07/64.

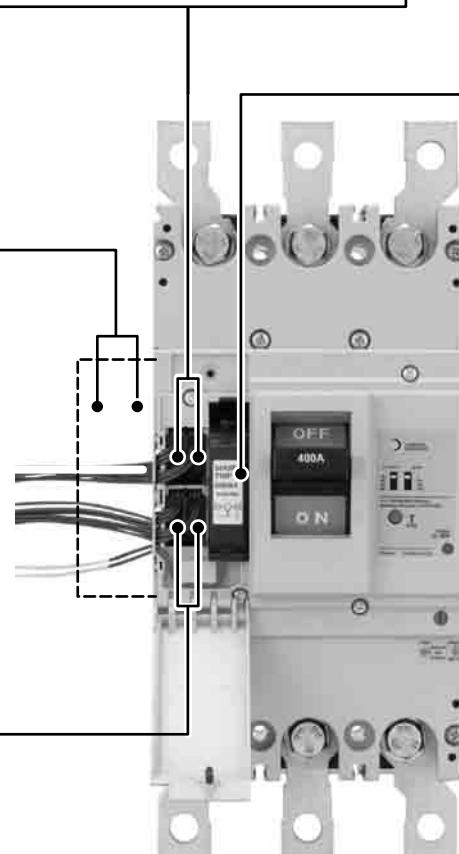

Terminal block (Type A)

A wiring terminal for internal accessories (Factory-mounted)
See page 07/66.

Auxiliary switch (Type W)

This switch is used for indicator lamp or control circuit. See page 07/63.

Undervoltage trip device (Type R)

The device is designed to protect circuits from harmful voltage drops. It can also be used for remote control purposes. The trip operates when the voltage drops to less than 70% of nominal coil rating, and the breaker cannot be reset until the voltage recovers 85% of its normal rating. See page 07/65.

Earth alarm switch (Type L)

This switch can be connected to a warning lamp or buzzer to indicate when the breaker has been tripped by leakage current. See page 07/63. (Factory-mounted)

Earth Leakage Circuit Breakers

G-TWIN series

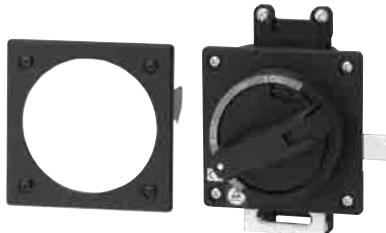

Accessories

■ Variation of external accessory

External operating handles

- N-type

See page 07/74.

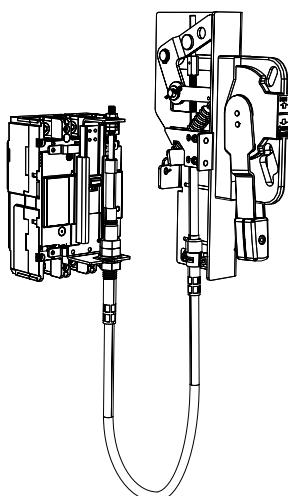

- V-type

See page 07/74.

- F-type

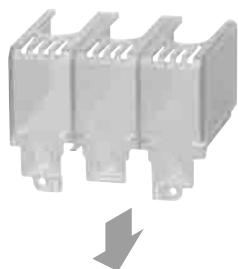

See page 07/74.

Terminal cover

Long type

See page 07/85.

Interphase barrier

See page 07/86.

Terminal cover

Short type

See page 07/85.

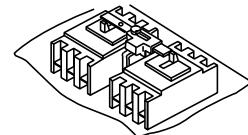

Steel enclosures

See page 07/83.

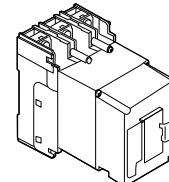

Mechanical interlock device

See page 07/70.

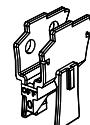

Motor-operating mechanism

See page 07/69.

Handle locking cover (L1)

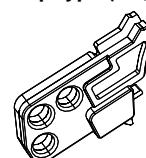

See page 07/87.

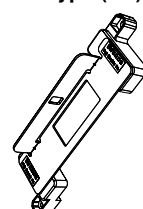

Padlocking device

See page 07/87.

- Cap type (Q1, QN)

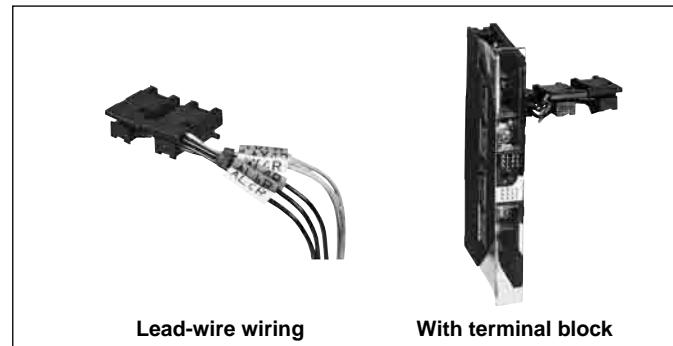

- Plate type (Q2)

■ Terminal blocks for auxiliary circuit

- It indicates the terminal No. of internal accessory. The connection method of internal accessory is lead-wire system and terminal block system.
- For the available configuration of internal accessory, see page 07/62.

		277	3	—	—	RAC277V
		380-480	4	—	—	RAC380-480V

Notes: • The operating voltages of undervoltage tripping devices are as follows:

Tripping voltage: 35% to 70% of rated voltage, closing voltage: 85% to 110% of rated voltage.

*1 Reset-allowed type: When the breaker handle is in the OFF or RESET state, tripping does not occur even if the R coil is not energized.

Turning ON with the R coil not energized causes normal tripping.

*2 Reset-prohibited type: When the R coil is not energized, reset operation cannot reset the tripped breaker to the OFF state.

Motor-operated breakers

■ Description

The breaker is fitted with a motor operating mechanism which enables ON, OFF and RESET operations to be carried out electronically by remote control.

The breakers do not conform to IEC and EN standard.

■ Type and ratings

ELCB type	Motor rating			Power source capacity	Mass (kg)
	Operating voltage	Operating time	Time rating		
EW32□-3P□M, EW50□-3P□M, EW63□-3P□M, EW100□-2P□M, EW100□-3P□M	100V DC 100/110V AC 200/220V AC	0.1s	15s per on-off operation	500VA	1.2
					1.3

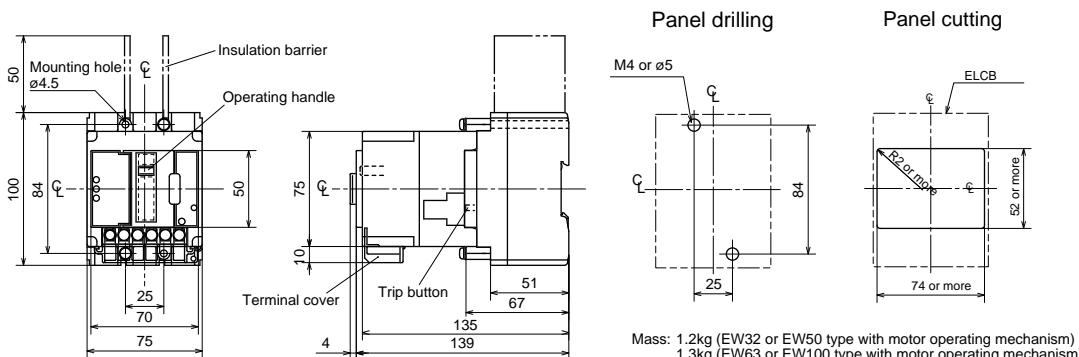

■ Ordering information

Specify the following:

1. Type number
2. Motor operating voltage

■ Dimensions, mm / Front mounting, front connection

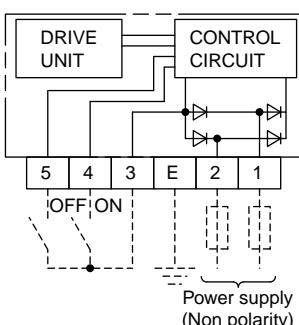

EW32□-3P, EW50□-3P, EW63□-3P, EW100□-2P, EW100□-3P

Notes: • Trip button operation can be carried out at right side of the breaker.
• IEC 35mm wide mounting rail is not available.

■ Wiring diagrams

100/110V AC, 200/220V AC, 100V DC

Earth leakage Circuit Breakers

G-TWIN series

External accessories

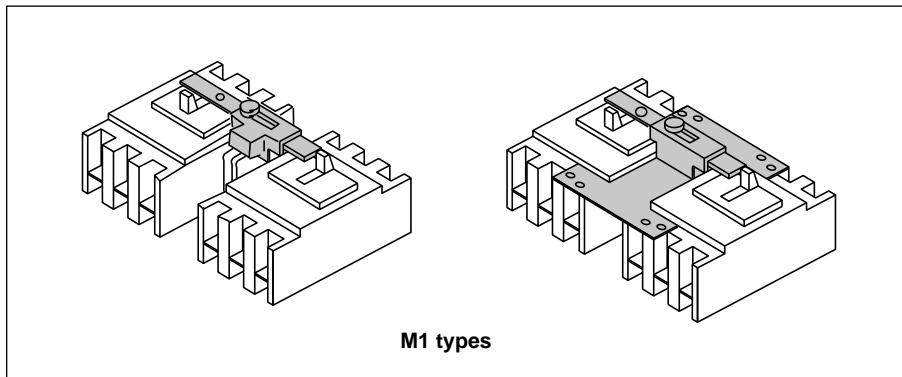

Mechanical interlocking devices

■ Description

These interlocking devices are mounted on the two separate breakers to prevent them from both being closed at the same time. A sliding mechanism that can be locked with a padlock is used. (The padlock is not included.)

They are designed for use when changing over power supplies.

These can be mounted to 3 types of breakers: front-mounting front-connection type, front-mounting rear-connection type (type X), and plug-in mounting type (type P). Interlock devices for flush mounting type breakers (type E, Y) are also available.

Earth leakage Circuit Breakers

G-TWIN series

External accessories

External operating handles

■ Description

Molded case circuit breaker handles are generally directly manual-operated but when mounted in motor control centers or on control panels they are sometimes required to be operated externally. To meet such applications FUJI offers the following three types of handles.

N type handle

This type has a knob handle directly attached to the breaker. It is easily fitted by cutting a hole in the panel, which is provided with a door interlock. They may be fitted to all breakers up to 800 ampere frame sizes.

Conformed to EN60947-1 isolation function.

Available for EN60204-1 power breaking device.

Conformed to UL489 (File No.E93289)

V type handle

The V type handle may be fitted to breakers of up to 800AF.

A separately sold extension shaft provides distance adjustment between the handle and breaker.

Conformed to EN60947-1 isolation function.

Available for EN60204-1 power breaking device.

Conformed to UL489 (File No.E93289)

F type handle

The F type handle may be fitted to breakers of 125 to 400AF.

It is a flange type handle, which is commonly used in the North American market.

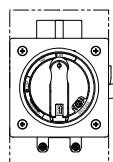

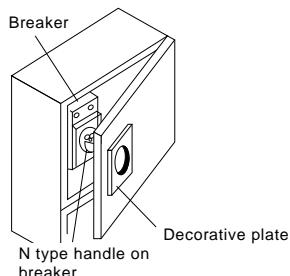

The drive section of the breaker and the external operating handle are connected with an optional cable.

Positioning between the breaker and the external operating handle is not required.

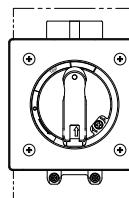

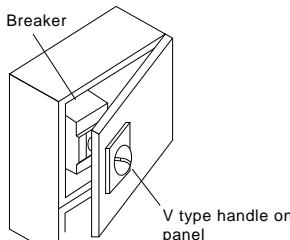

Conformed to UL489 (File No.E93289)

Steel enclosures

■ Description

Steel enclosures are available in three types — two with V-type handle which allows the operation from the outside and other with the operating handle of the breaker extending from it to allow it to be directly switched ON or OFF from outside the enclosure.

Enclosures with V-type handles are provided with a door interlocking mechanism which prevents the door from being opened in the ON condition.

Knockout holes for wiring use are provided as shown in the diagram.

Notes: • A gray-white terminal cover comes standard with the Global Series 125AF and 250AF.

*1 When using the external operating handle, part of the terminal cover (████) must be cut away.

*2 Crimp terminals for 325 mm² are not available.

*3 This type of cover can be mounted on the 400AF when flat terminals are not used.

Earth leakage Circuit Breakers

G-TWIN series

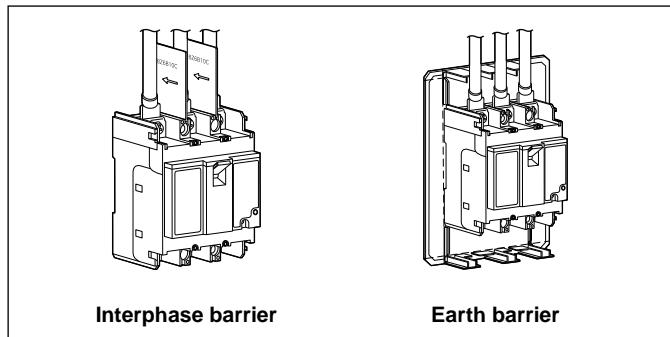

External accessories

Insulation barriers

■ Description

The interphase barriers are provided on frame size of 32AF to 800AF breakers for front mounting. The barriers are installed in the molded slots between terminals.

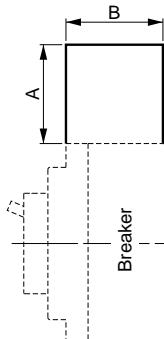

The earth barrier is used to increase the insulation with the mounting plate surface when two crimp terminals are wired. Installation of these barriers after wiring is possible even when an external accessory is installed.

Padlocking device and handle locking cover

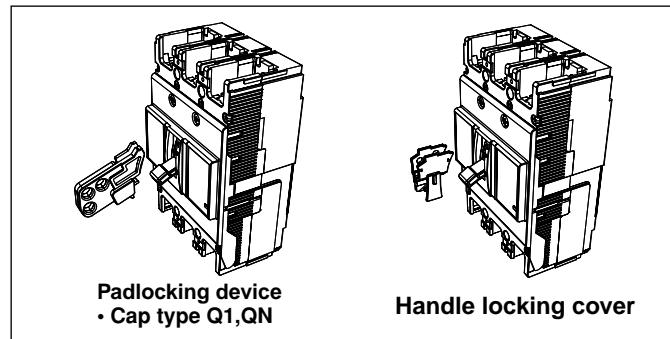

■ Description

• Padlocking device

These padlocking device lock the Breaker handle in the OFF position. Use a commercially available padlock with a shackle diameter of 3.5 to 5mm (5mm for the BZ6L10CA).

• Handle locking covers (Order Separately)

These simple handle locking covers can be easily installed by the user. Tripping is possible while the Breaker is locked ON.

■ Mounting modifications

Standard type FUJI breakers are front mounting with front connections. The standard breaker can easily be modified to become front mounting rear connection type, flush mounting type and plug-in type. The additional parts such as insulation bases, barriers, covers and similar parts are added as required.

Note: The applicable wire size for the lead terminal block is either ø1.6mm solid wire or 2mm² stranded wire.

External operating handles

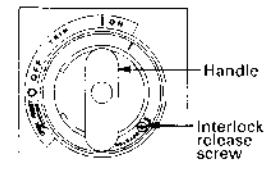

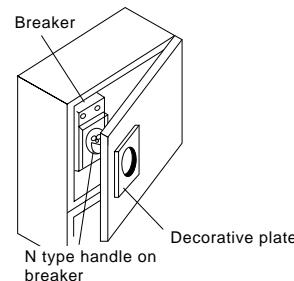

■ Description

Earth leakage circuit breaker handles are generally directly manual-operated but when mounted in motor control centers or on control panels they are sometimes required to be operated externally. To meet such applications FUJI offers the following three types of handles.

N type handle

This type has a knob handle directly attached to the breaker. It is easily fitted by cutting a hole in the panel, which is provided with a door interlock.

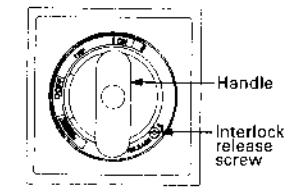

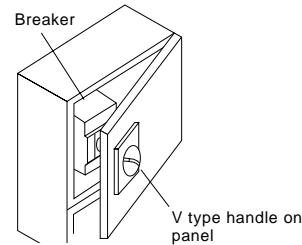

ELCB	N type handle
HG53B	BZ-N35B
HG103B	
HG203B	BZ-N50C

V type handle

The V type handle may be fitted to type HG203B. A separately sold extension shaft(BZ-VS1)provides distance adjustment between the handle and breaker. Conformed to EN60947-1 isolation function. Available for EN60204-1 power breaking device.

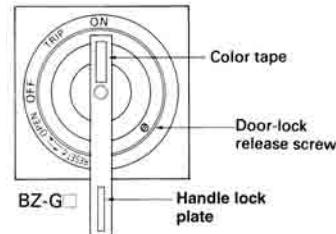

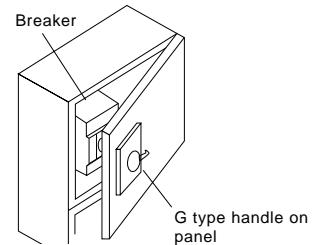

ELCB	V type handle
HG53B	-
HG103B	-
HG203B	BZ-V50C

G type handle

The G type handle is mounted on the panel, and also has a door-interlock. G type handle with a cylinder lock key is also available on request. G type handle with a padlockable handle lock plate is standard provided for HG53B and HG103B.

ELCB	G type handle

Notes:

- Handle protection degree IP54 (IEC60529, JIS C 0920)
- The handle cannot hold the door.

Earth Leakage Circuit Breakers

HG series

Accessories

G type operating handles

■ Operating instructions

1. ELCB operation

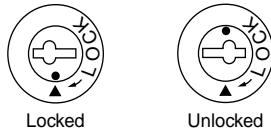

- Close the door and turn the handle to the ON position and the breaker will be positioned at ON.
- When the breaker is interrupted automatically the handle will move to the TRIP position.
- To reset move the handle to the RESET position.

2. Door panel locking

- Turn the handle to the OPEN position and the lock mechanism will be released thus allowing the door to be opened.
- The door cannot be opened when the breaker is positioned at ON.

3. Handle locking

The cylinder key can lock the handle in either the ON or OFF position. Even if it is locked at the ON position when the breaker trips, the handle will indicate TRIP.

4. Interlock release

This type is provided with an interlock release screw. Turn this screw if it is necessary to open the door at the ON position. This releases the lock and allows the door to be opened. When reclosing the door make sure the handle of the breaker coincides with the position (ON or OFF) of that of the external handle.

■ Type number nomenclature

BZ-G□C-K

Key

- Blank: Without key
- K: With cylinder key
- Q: With padlocking device

Basic type

■ Installation

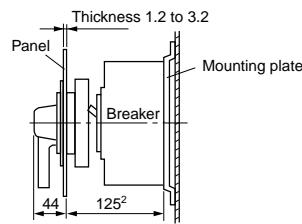

BZ-G35C

1. Drilling and cutting of the door panel

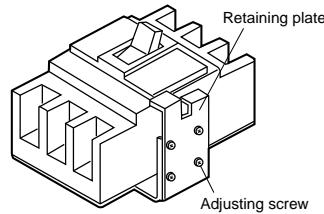

Drill and cut the door panel as shown in the drawing.

2. Mounting of the ELCB

The distance between the backside of the door panel and breaker mounting plate should be 125mm as shown in the drawing below.

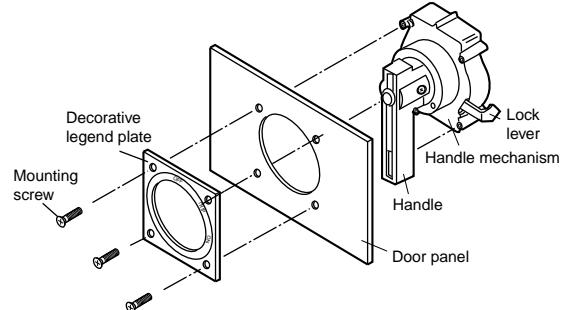

Mount the breaker and the retaining plate commonly to the panel board.

3. Fitting decorative plate and handle

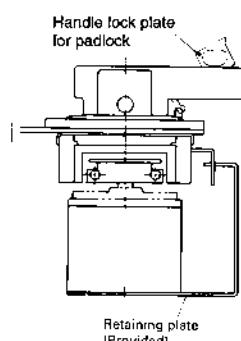

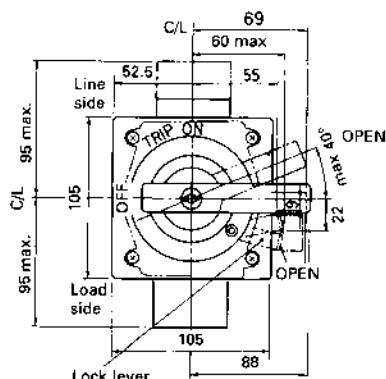

Fit the decorative plate and handle mechanism to the door panel by means of the mounting screws as shown in the illustration.

4. Adjusting the retaining plate

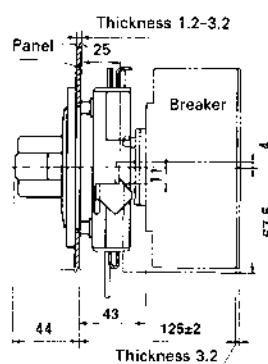

Adjust the height of the retaining plate by means of adjusting screws.

Terminal covers

■ Description

These terminal covers are used as guards to prevent accidental touch with live line terminations.
These terminal covers can be fitted to either line or load side.

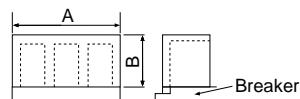

Short type BZ-TS

- Snap-on fitting
 - Transparent, sealing possible
- Long type BZ-TB**
- Crimp connection use
 - Transparent, sealing possible

■ Type of terminal cover

ELCB type	Terminal cover Short type	A (mm)	B (mm)	Mass (g)	Terminal cover Long type	A (mm)	B (mm)	Mass (g)
HG53B	BZ-TS35B	90	10	60	BZ-TB35B	90	40	122
HG103B								
HG203B	BZ-TS50B	105	10	76	BZ-TB50B	105	40	175

Packing quantity: 2 pcs.

Insulation barriers

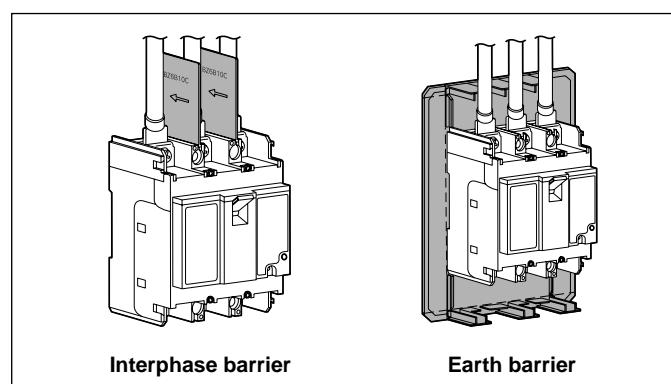

■ Description

The interphase barriers are provided on frame size of 30AF to 400AF breakers for front mounting. The barriers are installed in the molded slots between terminals.

The earth barrier is used to increase the insulation with the mounting plate surface when two crimp terminals are wired. Installation of these barriers after wiring is possible even when an external accessory is installed.

● Interphase barrier

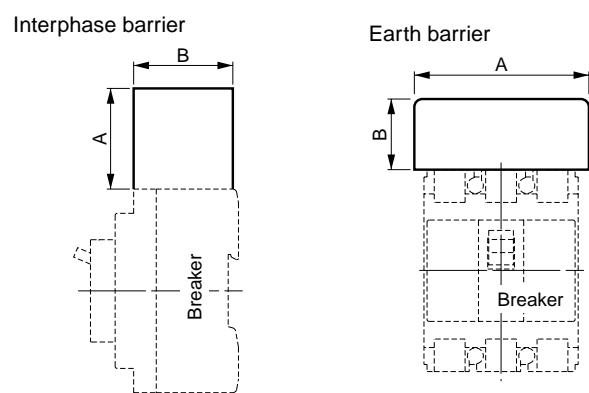

ELCB type	Interphase barrier				
	Type	Dimensions, mm		Packing quantity	
		A	B		
HG53B	BZ-B35B	50	73	4	38
HG103B					
HG203B	BZ-B50B	80	90.5	4	82

ELCB type	Interphase barrier				
	Type	Dimensions, mm*		Packing quantity	
		A	B		
HG53B	BZ-BL35B	130 (90, 110)	70 (40)	2	16
HG103B					
HG203B	BZ-BL50B	190 (105, 147)	100 (50, 72)	2	48

Note: * The value in parentheses is the dimensions after the barrier is cut.

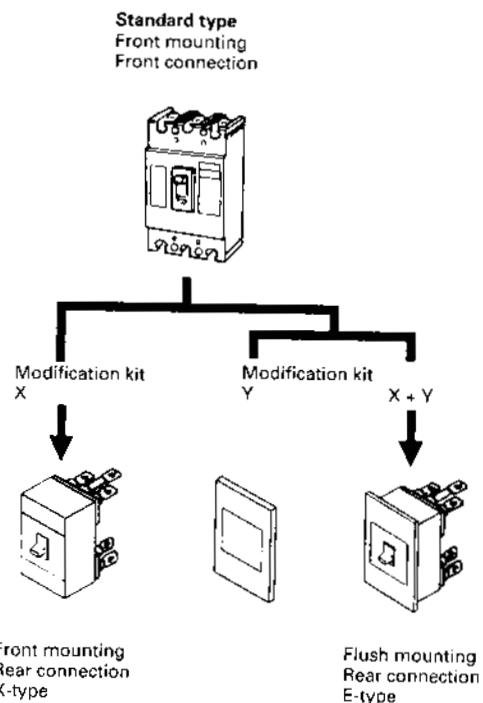

Earth Leakage Circuit Breakers

HG series

Accessories

Mounting modification kits

Standard type breakers are front mounting front connections. The standard breaker can easily be modified to become front mounting rear connection and flush mounting types by using the modification kits.

■ Modification kits

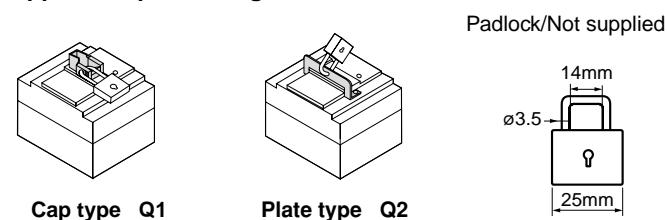

ELCB	Front mounting, front connection (Flat terminal)		Front mounting, rear connection (X type)		Flush mounting, rear connection (E type)	
	Kit type	Mass (kg)	Kit type	Mass (kg)	Kit type	Mass (kg)
HG53B	BZ-S35B-1003	0.35	BZ-X35B-1003	0.63	BZ-E35B-1003	1.11
HG103B						
HG203B	BZ-S50B-2253	0.5	BZ-X50B-2253	0.80	BZ-E50B-2253	1.27

■ Padlocking device

Breaker handles can be fitted with locks. The handle can be locked at either the ON or OFF position. If an overcurrent flows, the breaker trips even when the handle is kept locking. Add the suffix Q1 or Q2 to the ELCB type number to order the padlocking device (not sold separately).

Q1 : Cap type Q2 : Plate type

Applicable padlocking device

■ Handle locking covers

For HG53B, HG103B: **BZ-L35B**
For HG203B: **BZ-L50B**

Earth leakage protective relays

■ Description

In the earth leakage relay the breaking mechanism is omitted from the ELCB, and the ZCT and earth leakage tripping device are integrated into a common body. These relays are available in both instantaneous and time-delay versions. Generally these relays are used in conjunction with MCCB's, ACB's and motor starters.

Relay and sensor—Unit type

BRR/Pass-through type

- Instantaneous trip
- Solid-state tripping device
- Sensitive current: 30, 100, 200mA
500mA
- Control voltage: Up to 415V AC

Relay and sensor—Separate type

RRD/Pass-through type

- Time-delay trip
- Solid-state tripping device
- Sensitive current: 100/200, 200/500mA
500/1000mA
- Control voltage: Up to 415V AC

EL/Pass-through type

- Instantaneous or time-delay trip
- Solid-state tripping device
- Sensitive current:
30, 100/200, 200/500mA
500/1000mA
- Control voltage: Up to 415V AC
- Easily modified from front mounting
to flush mounting

Notes: *¹ Using IV 600V cable.

*² Non-tripping current is 0.5 times sensitive current.

*³ 100/110V or 200/220V is available.

■ Wire size

ZCT sensing hole diameter and applicable cable(IV 600V)

Diameter (mm)	Wire 2-wire	3-wire	4-wire
10	3.5mm ²	3.5mm ²	2mm ²
25	38mm ²	22mm ²	22mm ²
40	125mm ²	100mm ²	80mm ²
60	325mm ²	200mm ²	200mm ²
90, 120	500mm ²	500mm ²	500mm ²

Conforming to JIS C 3307.

Earth Leakage Protective Relays RRD series

Catalog Disclaimer

The information contained in this catalog does not constitute an express or implied warranty of quality, any warranty of merchantability or fitness for a particular purpose is hereby disclaimed.

Since the user's product information, specific use application, and conditions of use are all outside of Fuji Electric FA Components & Systems' control, **it shall be the responsibility of the user to determine the suitability of any of the products mentioned for the user's application.**

One Year Limited Warranty

The products identified in this catalog shall be sold pursuant to the terms and conditions identified in the "Conditions of Sale" issued by Fuji Electric FA with each order confirmation.

Except to the extent otherwise provided for in the Conditions of Sale issued by Fuji Electric FA, Fuji Electric FA warrants that the Fuji Electric FA products identified in this catalog shall be free from significant defects in materials and workmanship provided the product has not been: 1) repaired or altered by others than Fuji Electric FA; 2) subjected to negligence, accident, misuse, or damage by circumstances beyond Fuji Electric FA's control; 3) improperly operated, maintained or stored; or 4) used in other than normal use or service. This warranty shall apply only to defects appearing within one (1) year from the date of shipment by Fuji Electric FA, and in such case, only if such defects are reported to Fuji Electric FA within thirty (30) days of discovery by purchaser. Such notice should be submitted in writing to Fuji Electric FA at 5-7, Nihonbashi Odemma-cho, Chuo-ku, Tokyo, Japan. The sole and exclusive remedy with respect to the above warranty whether such claim is based on warranty, contract, negligence, strict liability or any other theory, is limited to the repair or replacement of such product or, at Fuji Electric FA's option reimbursement by Fuji Electric FA of the purchase price paid to Fuji Electric FA for the particular product. **Fuji Electric FA does not make any other representations or warranties, whether oral or in writing, expressed or implied, including but not limited to any warranty regarding merchantability or fitness for a particular purpose.** Except as provided in the Conditions of Sale, no agent or representative of Fuji Electric FA is authorized to modify the terms of this warranty in writing or orally.

In no event shall Fuji Electric FA be liable for special, indirect or consequential damages, including but not limited to, loss of use of the product, other equipment, plant and power system which is installed with the product, loss of profits or revenues, cost of capital, or claims against the purchaser or user of the product by its customers resulting from the use of information, recommendations and descriptions contained herein. The purchaser agrees to pass on to its customers and users, in writing at the time inquiries and orders are received by buyer, Fuji Electric FA's warranty as set forth above.

⚠ Caution "Safety precautions"

- Operate (keep) in the environment specified in the operating instructions and manual. High temperature, high humidity, condensation, dust, corrosive gases, oil, organic solvents, excessive vibration or shock might cause electric shock, fire, erratic operation or failure.
- Follow the regulations of industrial wastes when the product is to be discarded.
- The products covered in this catalogs have not been designed or manufactured for use in equipment or systems which, in the event of failure, can lead to loss of human life.
- If you intend to use the products covered in this catalog for special applications, such as for nuclear energy control, aerospace, medical, or transportation, please consult our Fuji Electric FA agent.
- Be sure to provide protective measures when using the product covered in these catalogs in equipment which, in the event of failure, may lead to loss of human life or other grave results.
- Follow the directions of the operating instructions when mounting the product.

D&C CATALOG DIGEST INDEX

Individual catalog No.

LOW VOLTAGE PRODUCTS Up to 600 Volts

01

Magnetic Contactors and Starters
Thermal Overload Relays, Solid-state Contactors

02

Manual Motor Starters and Contactors
Combination Starters

03

Industrial Relays, Industrial Control Relays
Annunciator Relay Unit, Time Delay Relays

04

Pushbuttons, Selector Switches, Pilot Lights
Rotary Switches, Cam Type Selector Switches
Panel Switches, Terminal Blocks, Testing Terminals

05

Limit Switches, Proximity Switches
Photoelectric Switches

06

Molded Case Circuit Breakers
Air Circuit Breakers

07

Earth Leakage Circuit Breakers
Earth Leakage Protective Relays

08

Circuit Protectors
Low Voltage Current-Limiting Fuses

09

Measuring Instruments, Arresters, Transducers
Power Factor Controllers
Power Monitoring Equipment (F-MPC)

10

AC Power Regulators
Noise Suppression Filters
Control Power Transformers

HIGH VOLTAGE PRODUCTS Up to 36kV

11

Disconnecting Switches, Power Fuses
Air Load Break Switches
Instrument Transformers — VT, CT

12

Vacuum Circuit Breakers, Vacuum Magnetic Contactors
Protective Relays
